Subject: Rolling Knolls - Field work yesterday June 24, 2015
Date: Thursday, June 25, 2015 10:36:58 AM

- ARACDIS sampled MW-19, MW-14 and MW-20 by low flow sampling. CDM Smith collected split sample at MW-19 for all parameters:

- o VOC (SIM)
- o SVOC (with PAH SIM)
- o PCB
- o Pesticide
- o Metals and mercury
- o Filtered metals and mercury
- o Cyanide

Note – one of the coolers from the split sampling on Monday that was shipped for overnight delivery did not arrive at the lab until Wednesday morning (according to Fed Ex, there were mechanical issues and as a result the cooler was transferred to a truck for shipment). Our lab coordinator asked DESA coordinator to contact the CLP lab (we may not contact them) and we confirmed that the samples still met the temperature requirements.

Thus we have split samples during two days this week and did not observe any problems with the PRP's activities. The PRP intends to complete sampling the remaining 5 monitoring wells today/tomorrow.
